

Table of Contents

1. Tools of the Trade

- 1.1 Waves: Messengers of the Universe
- 1.2 The Electromagnetic Spectrum
- 1.3 Radiation and the Stefan-Boltzmann Law
- 1.4 Spectroscopy and Kirchhoff's laws
- 1.5 The Doppler Effect

2. Reach for the Stars

- 2.1 The Power of a star
- 2.2 Parallax and Magnitudes
- 2.3 Spectral and Luminosity Classes
- 2.4 The Luminosity-Radius-Relationship
- 2.5 Stellar Masses

3. Stars and Nebulae

- 3.1 The Formation of Stars
- 3.2 The Main Sequence

4. Stellar Evolution of Low Mass Stars

- 4.1 Leaving the Main Sequence
- 4.2 Red Giants
- 4.3 Helium Flash
- 4.4 AGB Stars
- 4.5 Intermediate Mass Stars

5. Stellar Evolution of High Mass Stars

- 5.1 Red Supergiants
- 5.2 Blue Supergiants, Hypergiants, and Luminous Blue Variables
- 5.3 Wolf-Rayet Stars
- 5.4 Type I and Type II Supernovae

6. Stellar Remnants: Strange Objects

- 6.1 Neutron Stars
- 6.2 Black Holes
- 6.3 Theory of Relativity and the Lorentz Transformations

7. Galaxies Part I

- 7.1 The Milky Way
- 7.2 Hubble's Classification
- 7.3 Hubble's Law

7. Galaxies Part II

- 7.1 Galactic Evolution and Active Galaxies
- 7.2 Quasars and Blazars

8. Cosmology
